MEADOWS WEATHER ANALYSIS

DECEMBER 2022 REPORT

Roy Wysnewski — Meadow's Weather/Climate/Hurricane Analysis

WEATHER SUMMARY

December was both warmer and wetter than normal.

TEMPERATURE ANALYSIS

Many Meadows residents remember December 2022 as a cool month, when in fact, the average temperature was slightly above normal by one degree F. What stood out is the four-day period (24th through 27th) when the bottom literally dropped out and temperatures averaged 54 degrees F – twenty degrees below normal! Concluding the 'roller coaster' ride, a record high temperature day (86 degrees F) was recorded on the 31st.

Other statistics for the month include twenty above-normal temperature days and the one month-ending record high-temperature day.

RAINFALL ANALYSIS

December rainfall exceeded the monthly norm by 32%. The year-to-date total (65.97") exceeded our expected end-of-the year twelve-month average (51.6") by 28%. This year was the fourth-rainiest in the past twenty-four years!

Monthly temperature and rainfall data are presented in the graph.
