

# **The Meadows – Home to Great Weather!**

Meadow's Weather Analysis: February 2022 Report  
Roy Wysnewski

## **Rainfall & Temperature Data:**

Rainfall: 0.73 inches (YTD: 1.24 in.)

23 yr. February rainfall average: 1.68 in.

Average high temperature: 77 F (normal: 75.5 F)

Above normal high-temperature days: 18

Record high-temperature days: 4

April is one month in the year when we are 'home' to some of the best weather in the country – relatively dry with comfortable temperatures and humidity!

**February Weather Summary:** Despite the mixed-temperature signals -- first from January and now from February – in which there was an eleven-degree (F) temperature swing from the first half of each month to the second half, both months averaged 1-2 degrees above normal making it clear that 2022 may be another year for the record books!

Overall, the first half of February was cool and moist while the second half was warm (three record temperature days) and bone-dry.

**Temperature Analysis:** The average February temperature was 77 degrees F, 1.5 degrees above normal.

Other statistics include 18 days of above normal temperatures and there were four record high-temperature days, 3 occurring during the second half of the month.

**Rainfall Analysis:** February is the third consecutive month in which rainfall was less than half-normal. All of the rain fell on just three days during the first half of the month.

The three rain-days were well-short of an expected seven days of rain in February.
